

Parth Bansal

Data Science Intern

Parth Bansal was a Data Science Intern with [TrueRoll](#) July - September 2023. Overall, Parth demonstrated technical proficiency in data science, strong communication skills, and the ability to identify issues without allowing them to impede progress. Parth would make an excellent candidate for a data science position.

TrueRoll's core product attempts to find a small number of properties receiving tax benefits that they are not eligible for. During their internship, Parth was asked to build a model that ranked properties from most to least likely to be receiving a tax benefit for which they are ineligible for. This task was frustrated by the fact that our data is very poorly documented, poorly organized, and generally messy. Parth was able to identify the many problems with our data without allowing those problems to prevent the delivery of a minimally viable model. The model Parth produced was consistent with good data science principles, well documented, and comparable in performance to our current modeling feature.

I recommend Parth Bansal as a data science hire for any firm. Please feel free to contact me for any reason.
